

FLEXITOP

Fence top System

Unique to Advanced Perimeter Systems is our Electro-Fence Flexitop, which is a flexible electrified topping.

The Flexitop is fixed to the outside edge of the existing fence posts in order to place the electrified wires in front of the intruder and removing any footholds created by the tops of the fence posts.

If an intruder leans a ladder against the post or wires, the whole topping will flex creating a very unstable environment making it extremely difficult to climb up.

The Flexitop consists of a 1.5 metre spring steel post to which is attached 16 electrified wires. One of the wires is attached directly to the top of the post. There are also 5 wires below the top of the fence.
